

State Youth Union Sri Lanka

Membership Application — Product Documentation

Document : Product documentation (sample)
Application : SYU Sri Lanka (Flutter + Supabase)
Version : 0.10.2
Audience : Stakeholders / UAT / internal training

Contents

1. Overview	3
2. Roles and Access	4

1. Overview

This document introduces the SYU Sri Lanka membership application. The app supports youth member registration, profile management, news, events, and messaging, together with staff tools for district and division administration.

The system is built with Flutter (Android and web) and Supabase (Auth, Postgres with Row Level Security, Storage, and Edge Functions). Email verification and password recovery use a six-digit OTP sent through Gmail via the send-app-otp Edge Function, avoiding Supabase Auth email quotas.

Formatting of this sample follows a conventional product-report layout (Calibri-like body text, centered chapter titles, Contents with page links).

2. Roles and Access

Access is controlled by roles stored in Postgres and enforced with RLS.

Member — Completes registration, maintains a profile, reads news, RSVPs to events, and uses member chat.

Division admin — Manages members within a DS division, may add members, and can set the division WhatsApp group link.

District admin — Manages members within a district, creates division admins, and maintains divisional organizers.

Super admin — National scope: publish news and events, broadcast messages, manage youth clubs and staff admins (reference account: admin@syu.lk).

Detailed flows and the screenshot checklist are maintained in the repository under docs/USE_CASES.md, docs/ARCHITECTURE.md, and docs/SCREENSHOT_GUIDE.md (fifteen required screenshots and thirty-four flows).
